

Chic Antique takes the environment seriously

At Chic Antique, we constantly focus on our customers and strive to impose the least possible environmental-related expenses on our customers. At the same time, we are aware that the purpose of energy taxes is to reduce resource consumption and that it is a global issue – for the benefit of all of us.

In order to meet the environmental obligations imposed on us as a company, a minor environmental fee will be imposed on all shipments based on volume. We cover the remaining part of the packaging and environmental contribution costs.

The packaging and environmental costs mainly cover the statutory, state energy and environmental taxes in Denmark and the EU, for example the packaging waste system LUCID. In addition to the packaging and environmental costs, we further contribute to the environmental expenses that are charged by our suppliers, as well as to extra costs due to environmentally friendly packaging.

TOGETHER WE CAN MAKE A DIFFERENCE

In Chic Antique, we use packaging to protect your goods during transport. We have a strong focus on minimising the amount of packaging and the amount of waste – while keeping the goods packed properly so that they all arrive safely at your address.

In order to protect our environment, we have chosen to use cardboard boxes, mainly produced from recycled material, for our shipments. Therefore, much of the material – in which your shipments are packed – is already recycled – and it can actually be recycled by you as well.

Our stretch film and air cushions are mono foils, so these products can also easily be recycled.

We would like to encourage our customers and other partners to hold each other responsible when it comes to looking after the environment.

Our own initiatives include:

- ✓ Energy-saving LED lights in our large warehouses, in our offices and at our stands
- ✓ Sorting of plastic bottles, cans, batteries, cardboard, etc.
- ✓ Cardboard recycling
- ✓ IT systems that minimize internal paper consumption
- ✓ We choose partners who also have a strong focus on environmental issues
